

In/Out - Plug a 1/4 inch cable here

In/Out - Plug another 1/4 inch cable here

DC Jack - Plug in the 9v DC center negative plug here.

kill - This momentary switch operates as a standard kill switch. Tap out your kill pattern here

re kill - This momentary switch will activate a loop of the kill pattern you just entered via the kill switch.

While your pattern is being repeated (rekill mode) you can tap "Kill" to double the pattern speed. Tap again to quadruple speed. Tap a third time to return to your original speed.

Note: This pedal will not work well with HUGE signals, as occur in some synths. If you have a specific question about your signal path, just reach out and we can test in house. It also doesn't play well with buffered pedals. For best results, place your Memento in front of any buffered pedals.
